Montessori Life Sciences

The Study of Plants and
Animals in the 3 -6 class

Prepared by Ayopeju Falekulo

About Montessori Nigeria Resources

Montessori Nigeria Resources is a committed Montessori Inspired Facebook and WhatsApp group bringing together the best Montessori practices , tips, and Resources for the African Montessori Movement.

Our goal is to show case what is best in the Montessori setting in the country and spread the word about this effective method of educating the child.

We look forward to more schools truly embracing the Montessori Ethos in their establishments.

Our Resources

In collaboration with Addlo Montessori Training Center we have designed several Montessori inspired 3 part cards and published a book:

Teach Your Child to Read

Montessori Life Science

The goal is to introduce the world to the child in an orderly fashion so that they can make sense of all the impressions about plants and animals around them.

Children learn through their senses so allow them to experience the world and then help them make sense of it.

A lot of the work you will be doing with the child would include exploration and classification.

Scientific definition and classification is part of the process. You need to familiarize yourself with the information needed to help the child discover and explore our world.

Know your taxonomy : the classification of things especially organisms

Children will surprise you because they love this it is not difficult or complicated for them to embrace!

This is where we rediscover with our children the joy and wonders of the world we live in. Do not ignore this part of the child's education

The Life Science Lessons

Living and Non-Living

Plants and Animals

Vertebrates and Invertebrates

Parts of an Animal

Parts of a Plant

The Life Science Lessons

Parts of a Frog

Parts of a Fish

Parts of an Insect

Parts of a Hen

The Life Cycle of a Frog

Parts of the roots

Parts of a leaf

Parts of a flower
